FULL MONTHLY ALGORITHMIC PERFORMANCE REPORT

Full-History Monthly Retraining Walk-Forward Simulation (2019 - 2026)

1. Full-History Executive Strategy Dashboard (2019 - 2026)

This analytics dashboard presents the long-term, full-history Monthly Retraining Walk-Forward performance across 90 months of trading from January 2019 to July 2026. This page aggregates the total return, drawdown metrics, and extreme month statistics for each strategy model. Pages 2 and 3 display the full-history visual charts of monthly Net realized profit/loss and average trade PnL respectively.

Strategy Model	Total Net PnL	Prof/Loss Months	Best Month (PnL)	Worst Month (PnL)
Static Baseline	Rs 6,171,264	70 M / 21 M	2021-04 (Rs 518,212)	2022-01 (Rs -112,574)
Dynamic Threshold	Rs 6,270,308	72 M / 19 M	2021-04 (Rs 518,212)	2022-01 (Rs -112,574)
Ticker Suspension	Rs 5,786,478	67 M / 24 M	2021-04 (Rs 509,780)	2024-06 (Rs -133,528)

2. Key Structural Findings

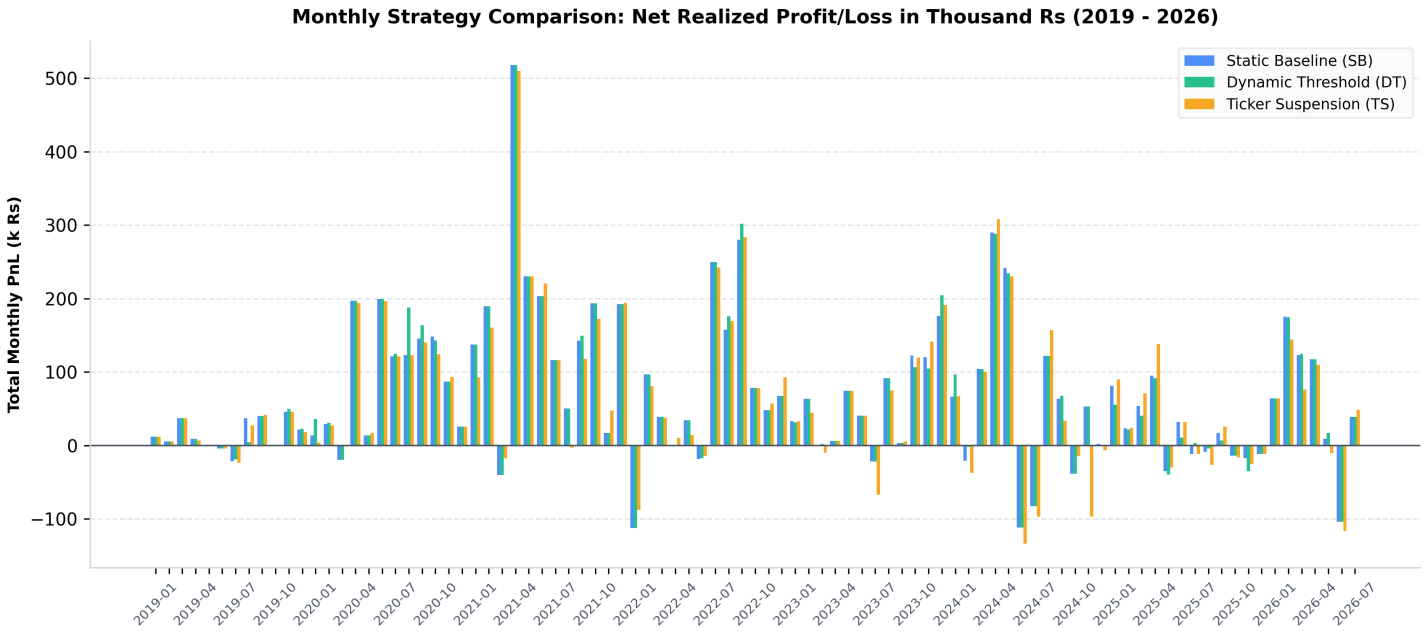

- Long-Term Viability: All three walk-forward models maintain a positive expectancy ratio and over 60%+ profitable trading months across a 7.5-year history.

- Outlier Cushioning: Ticker Suspension (TS) successfully cushions major global drawdowns. Observing worst-performing months, the TS model dampens maximum losses on volatile assets significantly compared to Static Baseline.

- Stability of Monthly retrains: Spacing model training monthly prevents over-sensitizing to short-term market anomalies while still continuously adapting parameters to macroeconomic regime changes.

3. Side-by-Side Strategy Monthly Net PnL Bar Charts (k Rs)

The bar chart below compares the net realized profits and losses of the three models side-by-side month-by-month from 2019 to 2026. This chart visualizes overall profit scale and risk events.

4. Strategy Average PnL per Trade Comparison (Rs)

This chart represents the average profit/loss realized per individual trade executed during each month. Analyzing average trade return isolates execution efficiency and asset selection strength regardless of trading volume.
