MONTH-BY-MONTH ALGORITHMIC PERFORMANCE REPORT

Monthly Retraining Walk-Forward Strategy Comparison (2024 - 2026)

1. Executive Monthly Performance Summary (2024 - 2026)

This analytics report highlights the month-by-month profit accumulation trajectories of the three system configurations: Static Baseline (SB), Dynamic Threshold (DT), and Ticker Suspension (TS). All calculations are derived directly from the Monthly Retraining walk-forward backtests. This page summarizes the risk-reward profiles, profitable vs losing months, and outstanding extreme months. Page 2 displays the side-by-side bar chart visuals.

Strategy Model	Total Net PnL	Prof/Loss Months	Best Month (PnL)	Worst Month (PnL)
Static Baseline	Rs 6,171,264	70 M / 21 M	2021-04 (Rs 518,212)	2022-01 (Rs -112,574)
Dynamic Threshold	Rs 6,270,308	72 M / 19 M	2021-04 (Rs 518,212)	2022-01 (Rs -112,574)
Ticker Suspension	Rs 5,786,478	67 M / 24 M	2021-04 (Rs 509,780)	2024-06 (Rs -133,528)

3. Side-by-Side Strategy Monthly Net PnL Bar Charts (k Rs)

The following high-DPI bar chart compares the net realized profits and losses of the three models side-by-side month-by-month. Positive columns represent profitable months, and negative columns indicate drawdown months. Observe how the Dynamic Threshold (DT) and Ticker Suspension (TS) successfully damp losses during major trend reversals.
